

KEEP ON RUNNING WITH POWERFUL SOLUTIONS

Pon Power Oil & Gas supplies the oil & gas industry with power solutions in the 8 kW to 16 MW range. With Caterpillar engines at the heart of their power unit, clients are assured of a reliable, fuel-efficient, environment-friendly, high-quality product that enables them to achieve an attractive total cost of ownership. Pon Power's own extensive service organisation and the worldwide Caterpillar dealer network offer the best guarantee for ensuring optimum availability of the power unit.

RELIABILITY AND SAFETY SUBJECT TO THE MOST STRINGENT REGULATIONS

Pon Power Oil & Gas is ISO 9001 and VCA certified and pays particular attention to Health, Safety and the Environment (HSE). The highest level of market-related HSE standards applies throughout our entire organisation and, if necessary, can be aligned with the client's specific requirements. Promoting safety awareness and a zero tolerance policy on safety form an essential part of the responsibility of the management and employees.

Pon Power Oil & Gas is an official, certified Caterpillar dealer with added value: Pon Power Oil & Gas conducts its own research and development in close cooperation with the Caterpillar organisation, which has led to numerous innovative developments for reducing emissions, downtime and operational costs. Examples include dual fuel systems, waste-heat recovery, low emission kits, remote monitoring, increases in the standing times of components and the development of condition-based maintenance.

Pon Power Oil & Gas is an official Caterpillar dealer and supplies power solutions for onshore and offshore industries. The company has its own branches in the Netherlands, Norway and Denmark for sales, services and 24/7 technical support.

Pon Power Oil & Gas solutions help clients to get their oil and gas to customers in a safe, environment-friendly, reliable way, at the lowest costs, wherever they are, whenever they need it.

It goes without saying that all power modules are designed to meet the stated requirements for ambient conditions, emissions, area classifications, and the specifications of marine classification societies. On request, all engines and power units can be thoroughly tested in the ultramodern Pon Power test facilities before shipping. Working closely with the client, Pon Power Oil & Gas delivers on time, within the budget and in accordance with the specifications, such as the minimum performance requirements. Pon Power Oil & Gas extracts and combines useful technical information from operations, projects, maintenance, engineering and procurement, to design and deliver a unit that exceeds the technical requirements as well as the client's expectations. The approach of establishing a close relationship with the customer enables Pon Power Oil & Gas to extend the scope from supplying an engine and power unit to supplying full functional skids simply on a functional specification. HSE, innovation and service flexibility obviously form an integral part of our proactive client and product approach.

A FUNCTIONAL SPECIFICATION IS ENOUGH TO DELIVER PERFECT QUALITY

Total solutions

Pon Power Oil & Gas is the single-source supplier for all power applications. The company always offers you a tailor-made total solution, whether it's for pumping, compression, power generation or some other form of auxiliary, main or emergency power.

You are assured of professional support from Pon Power Oil & Gas throughout your power unit's entire life cycle. The know-how and experience developed at Pon Power Oil & Gas ensures your power unit has the optimum design right from the project's initial study phase or at any stage in its lifetime.

CUSTOMER SERVICE

Pon Power Oil & Gas guarantees technical assistance round the clock, anywhere. The Pon Power Oil & Gas professional Service Team is highly-motivated, well-trained, and certified to carry out any onshore and offshore work worldwide. The Customer Service Centre is staffed 24 hours a day, 7 days a week, to provide technical support. Immediate action can be taken to provide you with a proper solution quickly.

Thanks to our intensive internal training programme and close cooperation with Caterpillar USA, Pon Power Oil & Gas service engineers are familiar with the latest technical developments, can solve any problems quickly and can keep your power unit up-to-date. At Pon Power Oil & Gas we also pride ourselves on ensuring rapid availability of spare parts. With more than 220 dealers in 200 countries, the Caterpillar organisation offers the most integrated service network in the world.

CATERPILLAR®

Pon Power Oil & Gas offers full service and lifetime agreements for preventive and corrective maintenance that meet the specifications of the customer's individual requirements. The range of service agreements covers everything from framework agreements for parts and regular service to the complete management of the entire brand-independent engine and unit population. Pon Power Oil & Gas offers enhanced in-house developed remote operation to help customers reduce professional-personnel costs. Pon Power Oil & Gas's innovative approach and close customer relationship ensure continuous technical developments. We therefore offer an extensive range of certified training courses either on location or in our own special training facilities. This enables participants to quickly familiarise themselves with the power unit and to obtain a proper insight into the latest technological developments. Afterwards, the operator is capable of carrying out all the necessary work and maintaining optimum availability of the power unit at remote locations. The operator's crew and the specialists at Pon Power Oil & Gas also form a team that is capable of immediately and effectively dealing with any challenges the customer faces. Pon Power Oil & Gas issues technical leaflets with details of the latest developments and training courses.

STAYING AHEAD THROUGH INNOVATION

Partnership

During the 30 years that Pon Power Oil & Gas has been operating in the oil and gas business, the company has gained a wealth of application experience and built up an impressive list of references. Pon Power Oil & Gas is pleased to share its experience and know-how with you. This enables the latest developments in techno-

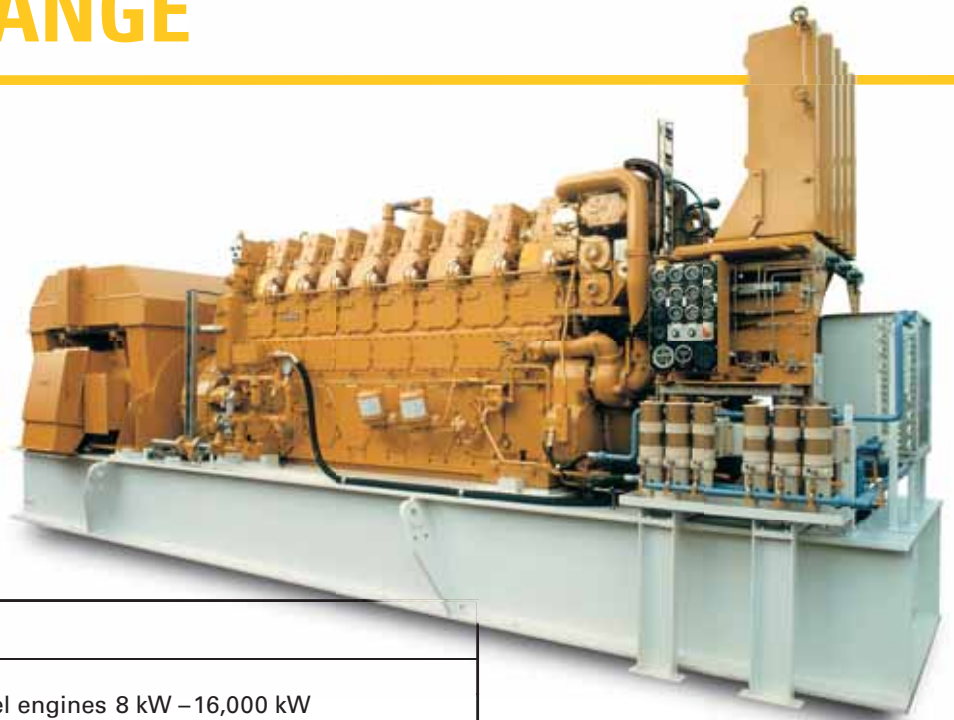

logy, safety, care of the environment and operations to play a constructive role throughout the power unit's entire life cycle. A partnership with Pon Power Oil & Gas therefore means more than the simple delivery, installation and maintenance of reliable power units; we support you in your competitive, highly demanding market.

To meet Hazardous Area Zone II and ATEX requirements, Pon Power Oil & Gas selects special components, such as water cooled manifolds and exhaust systems, spark and flame arrestors, Ex equipment, IP55 generators and TEFC (Totally Enclosed and Fan Cooled) enclosures with CE marking. Enclosures may include features such as an air-conditioned control room, effective weather protection and noise reduction, in combination with easy lifting and transport.

PRODUCT RANGE

Engines
Caterpillar diesel engines 8 kW – 16,000 kW Caterpillar gas engines 11 kW – 6,000 kW
Generator sets
Emergency generators Essential generators
Pump sets
Fire pumps Crude oil booster pumps Water injection pumps
Drive applications
Reciprocating compressor drive Crane drive
Micro turbines
Capstone micro turbine 30 kW Capstone micro turbine 60 kW
