

CATERPILLAR 3500 ENGINE TRAINING

Pon Powers's training courses explain the features and benefits for several Caterpillar engines. The 3 days training course will explain how Cat engines differentiate itself in the marketplace, and are designed to give you both theoretical and practical engine experience.

We offer several standard courses in our training program. On your request we can also offer tailor-made training, suiting your operation and products. All our training courses are offered to a competitive price.

Our training courses explain the features and benefits for Caterpillar engines, and upon the end of these courses you will:

- Being familiar with the main characteristics for the engines
- Know the terms for warranty in the engines, spare parts and service done by authorised mechanics
- Know the characteristics for one- and two circuit cooling systems
- Know the preventive maintenance in theory
- The engines lubrication system. And in theory know how it is constructed and how it works
- The fuel system and cooling systems, sensors and injectors
- Troubleshooting on the engine by using Electronic Technician (ET)
- Being able to carry out the disassembly and assembly of the cylinder top of the engine
- Being able to carry out the adjustments of the inlet- and exhaust valves and the fuel injectors
