

CSA **FILTER** PACKAGES

CAT FILTERS:

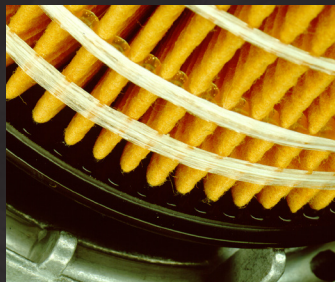

- Cat filters eliminate all the risks taken when using other filter brands.
- Cat filters are constructed and made to satisfy the most stringent filter requirements in the industry – Caterpillar's specifications. Optimize your operation by minimizing the risk of breakdown due to close follow-ups and engine knowledge.
- Cat filters have properties that others do not have, such as:
 - Acrylic strings keep the filter parts separated
 - The spiral support bands reinforce the medium and provide high stability
 - The nylon centre pipe and aluminum bottom plate prevent metallic pollution
 - The cast end cover eliminates leaks
- Another sign of quality is the powerful filter housing that protects any Cat filter. The one-piece construction resists high pressure loads, e.g. during cold starts, and leaks hardly ever occur.

OUR GOAL:

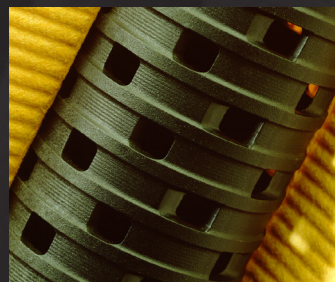

TO ENSURE THAT CAT ENGINES ARE AS WELL PROTECTED THE DAY BEFORE THE OIL CHANGE AS THE DAY AFTER

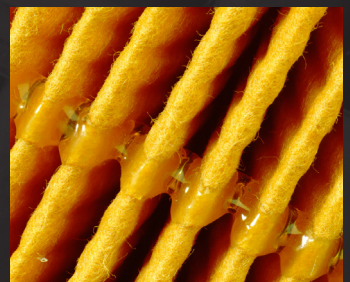

SPIRAL ROVING

MOLDED END CAPS

CENTRE-TUBE

ACRYLIC BEADS
